What time of the day is best for exercise? A person can exercise at almost any time of the day except about two hours ① following a large meal, or the noon and early afternoon hours on hot and humid days. Many people enjoy exercising early in the morning because it gives them a good boost ② to start the day. If you have a difficult time sticking to an exercise program, early morning exercise is best because the chances of some other activity or conflict interfering with your exercise time ③ is minimal. Some people prefer the lunch hour for weight-control reasons. By exercising at noon, they do not eat as big a lunch, ④ which helps keep down daily caloric intake. ⑤ Highly stressed people seem to like the evening hours because of the relaxing effects of exercise.

The reason nature is so wasteful is that scattershot strategies for reproduction are the best way to do ① what mathematicians call “fully exploring the potential space.” Imagine a desert landscape with two pools of water separated by some distance. If you are a plant ② growing next to one of those pools, you can have one of two different reproductive strategies. You can drop seeds near your roots, ③ where there’s a pretty good chance water can be found. This is safe, but soon leads to crowding. Or you can toss the seeds into the air and let ④ it float far away. This means that almost all will die, but it is the only way ⑤ to find that second pool of water, where life can expand into a new place, perhaps a richer one. It is wasteful, but it can pay off in the end.
