Living things naturally return to a state of balance. When we are disturbed by forces acting on us, our inner machinery kicks in and returns us to a balanced state of equilibrium. *Homeostasis* is the word we use to describe the ability of an organism to maintain internal equilibrium by adjusting its physiological processes. Most of the systems in animal and human physiology are controlled by homeostasis. We don't like to be off balance. We tend to keep things in a stable condition. This system operates at all levels. Our blood stays the same temperature. Except for extraordinary exceptions, when people find ways to intervene using methods more powerful than our tendency to equilibrium, our habits, behaviors, thoughts, and our quality of life stay pretty much the same too.

- ① physical balance needed for mental equilibrium
- ② inner mechanisms to enhance the quality of life
- ③ general tendency of organisms to keep equilibrium
- ④ major differences in animal and human physiology
- ⑤ biological processes resulting from habitual behaviors

Words & Phrases

- act on ~에 작용하다, 영향을 주다
- homeostasis 항상성
- intervene 개입하다, 끼어들다

- kick in 작동하다, 효력을 나타내다
- physiological 생리적인

- equilibrium 평형
- off balance 균형을 잃은, 균형이 깨진
