The good news is that it's never too late to start building up muscle strength, regardless of your age. Ideally, though, it's best to start in your mid-forties when muscle mass starts to decline significantly. "Once you've started, it can take just six weeks to see an improvement of up to 20 percent in your muscle capabilities," says Dr. Ward. Studies have found that intense programs of strength training can help even weak older people double their strength, as well as enable them to walk faster and climb stairs more easily. And muscle isn't all you gain—strength training can help combat osteoarthritis, depression, and risk factors for heart disease and diabetes.

* osteoarthritis 골관절염

- ① 근력 운동의 효과는 단기간에 얻기 힘들다.
- ② 근력 운동에 필요한 기초 체력을 길러야 한다.
- ③ 40대 이후에는 성인병 예방에 주의를 기울여야 한다.
- ④ 운동량은 연령에 따라 적절히 조절해야 한다.
- ⑤ 근력 운동은 나이가 들어서도 건강에 유익하다.
