(A)

The textile industry routinely deals with dangerous chemicals. Most dye colors contain toxic elements. In fact, the trimmings, or excess cloth, from Rohner Textil's factory contained so many questionable chemicals that the Swiss government classified them as dangerous waste. Furthermore, the trimmings couldn't be burned or buried in Switzerland to comply with government regulations, but they had to be exported — shipped to a country with looser regulations, such as Spain.

(B)

McDonough's new process wasn't just safer, but it was also cheaper. Manufacturing costs shrank twenty percent. The savings came, in part, from the reduced complexity and expense of dealing with toxic chemicals. Workers no longer had to wear protective clothing. And the scraps — instead of being shipped to Spain for burial — were converted to felt, which was sold to Swiss farmers and gardeners for crop insulation. McDonough proved that there can be a _____ between business goals and environmental goals.

(C)

When the production process went on line, inspectors from the Swiss government came to check the water flowing out of the plant to make sure chemical emissions were within legal limits. "At first, the inspectors thought their equipment had broken," said McDonough. The instruments were detecting nothing in the water. Then the inspectors tested the water flowing into the factory, which was Swiss drinking water, and found that the equipment was fine. McDonough said, "The fabrics during the production process were further filtering the water."

(D)

To address this problem, Bill McDonough and Michael Braungart studied 8,000 chemicals commonly used in the textile industry. They measured each chemical against a set of safety criteria. Of the chemicals they tested, 7,962 failed. They were left with thirty-eight chemicals — but those were "safe enough to eat" according to McDonough. Amazingly, using just those thirty-eight chemicals, they were able to create a complete line of fabrics containing every color but black. The fabric they chose was made from natural materials — wool and a plant fiber called ramie.
