Since the beginning of time, the mysterious nature of dreaming has led people to believe that dreams were messages from the other world. Dreams have been regarded as prophetic communications which, when properly decoded, would enable us to foretell the future. There is, however, absolutely no scientific evidence for this theory. It is certainly true that individuals who are concerned about a traumatic event, such as the threat of the loss of a loved one who is sick, will dream about that loved one more than would otherwise be the case. If the dreamer then calls and finds that the loved one has died, it is understandable for him or her to assume that the dream was a premonition of that death. But this is a mistake. It is simply a(n) _____ correspondence between a situation about which one has intense concern and the occurrence of the event that one fears.

To prove the existence of premonitory dreams, scientific evidence must be obtained. We would need to do studies in which individuals are sampled in terms of their dream life and judges are asked to make correspondences between these dream events and events that occurred in real life. A problem that arises here is that individuals who believe in premonitory dreams may give one or two striking examples of 'hits,' but they never tell you how many of their premonitory dreams 'missed.' To do a scientific study of dream prophecy, we would need to establish some base of how commonly _____ correspondences occur between dream and waking reality. Until we have that evidence, it is better to believe that the assumption is false.

*premonitory 예고의, 전조의

Words & Phrases

- be regarded as ~로 여겨지다
- foretell 예언하다
- premonition 예고
- arise 발생하다

- prophetic 예언적인
- traumatic 충격적인
- correspondence 일치
- assumption 가정, 가설

- decode 해석하다, 해독하다
- assume 추정하다, 상정하다
- obtain 획득하다, 얻다
