Observations and general circulation models of climate trends indicate that all regions of the world will see increased warming, and this will be particularly marked in polar areas and mountainous regions. Coastal areas will experience sea level rise. By 2050, we will see higher temperatures and sea levels, changes in sea surface conditions and coastal water quality, increased weather variability, and more frequent and extreme weather events, even if global greenhouse gas emissions are stabilized at 2°C above pre-industrial levels. Already the entire energy supply chain is significantly vulnerable to climate variability and extreme events that can affect energy resources and supplies as well as seasonal demand; the projected changes will increase this vulnerability, and thus the need to adapt to changing conditions.

- ① causes of extreme weather conditions
- ② regional differences in climate change
- ③ sustainable development of the environment
- ④ preventive measures against global warming
- ⑤ climate change and its impacts on energy systems

American alligators have no natural predators except humans. Hunters once killed large numbers of these animals to make shoes, belts and pocketbooks. Other people considered alligators to be useless and dangerous, and hunted them for sport or out of hatred. Between 1950 and 1960, hunters wiped out 90% of the alligators in Louisiana, and by the 1960s the alligator population in the Florida Everglades was also near extinction. These hunters often say “So what?” but they overlook _____. Alligators dig deep gator holes that collect fresh water during dry spells. As alligators move from gator holes to nesting places, they help keep areas of open water free of invading vegetation. Without these ecosystem services, fresh water ponds and coastal wetlands found in the alligator’s habitat would be filled in by shrubs and trees, and dozens of species would disappear.

- ① alligators in danger of extinction
- ② the destruction of wildlife habitat
- ③ the roles of alligators in ecosystems
- ④ the adaptation of alligators to environment
- ⑤ the harmful effects of alligators on ecosystems
