Whatever the professional musician may hold, most musical beginners still search for specific words with which to pin down their musical ____ (A) _____. That is why they always find Tchaikovsky easier to “understand” than Beethoven. In the first place, it is easier to pin a meaning-word on a Tchaikovsky piece than on a Beethoven one. Much easier. Moreover, with the Russian composer, every time you come back to a piece of his it almost always says the same thing to you, whereas with Beethoven it is often quite difficult to put your finger right on what he is saying. And any musician will tell you that that is why Beethoven is the ____ (B) _____ composer. Because music which always says the same thing to you will necessarily soon become dull music, but music whose meaning is slightly different with each hearing has a greater chance of remaining alive.

The visual arts are nonverbal languages, but in more ways than one might expect. We all know that paintings communicate, and that we are able to derive some information from them more effectively than we can from words.

- (A) But few of us are aware of the fact that obtaining information from an image is not automatic — not even from the most realistic picture of a familiar subject.
- (B) We have to be able to “read” a particular system of distortions that has been used to translate the original three-dimensional scene into a two-dimensional reproduction.
- (C) For example, a great many words would be needed to describe a miracle performed by a saint or what the Rocky Mountains looked like in 1848 with the same degree of detail found in a painted image of such a subject.
