In almost all countries, nuclear energy has been incorrectly packaged as “clean, renewable energy” simply because it produces no carbon emissions. ① This may be true, but it is also a fact that nuclear power plants produce a by-product that is far more dangerous than carbon: *live radioactive waste*. ② Of all the energy sources, nuclear energy has definitely the lowest impact on our environment, including land, water, and air. ③ Although not widely known, nuclear power plants must shut down approximately every eighteen months to replace their fuel rods. ④ The old fuel rods contain short-lived, low-level poisons as well as a highly toxic, radioactive material called Np-237, which has a half-life of more than two million years. ⑤ Today we produce the “equivalent of one-hundred two-level buses” of nuclear waste every year — waste that has to be stored somewhere.

* half-life 반감기 (방사성 원소의 원자 수가 최초의 반으로 줄 때까지 걸리는 시간)

What teenagers are not good at is fully understanding the consequences of what they are doing, in the eyes of society as a whole. And this is where teaching (in the broadest sense of the word) comes in. They need to know when it would be appropriate to text and when it would not be. They need to know when textisms, the languages used in text messages, characterized by the use of abbreviations, single letters and symbols, are effective and when they are not. They need to appreciate the range of social reactions which texting, in its various forms, can elicit. This knowledge is slowly acquired from parents, peers, and teachers. Teenagers have to learn to manage this new behavior, as indeed do we all. For one thing is certain: texting is not going to go away in the foreseeable future.

- ① 기성세대는 십대와의 소통을 위해 문자 메시지를 적극 활용해야 한다.
- ② 십대는 문자 메시지를 분별 있게 사용하는 법을 배워야 한다.
- ③ 휴대 전화 개발 시 십대의 휴대 전화 사용 성향을 고려해야 한다.
- ④ 문자 메시지용 축약 표현을 표준 언어 표현으로 인정해야 한다.
- ⑤ 과도한 휴대 전화 사용으로 인한 건강상의 위험을 경고해야 한다.
